

PSMA PET-CT for Suspected Prostate Cancer Recurrence

Oceanic Molecular, at the Hollywood Medical Centre, is the only private provider of PSMA PET-CT in Western Australia

- 68Ga PSMA is a new highly sensitive imaging marker for prostate cancer.
- PSMA PET-CT can identify lesions suspicious for prostate cancer when the level of prostate specific antigen is very low.
- Detecting recurrence early may significantly influence clinical management.
- Treatment and survival after recurrence depends on many factors including early detection
